## GMWATCH.ORG

### About GM Watch

**GM WATCH** has a global focus but developed out of the Norfolk Genetic Information Network (NGIN - pronounced 'engine') - a news and research service founded in Norfolk, UK in the spring of 1998 to report on the growing concerns about genetic engineering, also known as genetic modification or GM.

**GM WATCH** has developed a particular focus on the use of hype, propaganda and spin to promote this technology, and on exposing the role played by corporate-friendly scientists, industry front groups, PR companies, lobbyists, and political groups.

### Biotech boss smears organic in New York Times / More gammon and spinach (26/9/2006)

### 1.RE: AGBIOVIEW'S WORLD OF GAMMON AND SPINACH

GM Watch

Following yesterday's post about AgBioView's 'distract and attack' campaign of gammon and spinach, up popped AgBioView's latest GM bulletin. The diet was entirely as before - very little about GM but lashings of spinach, manure and DDT.

Here are yesterday's headlines:

Today in AgBioView from [www.agbioworld.org](http://www.agbioworld.org): September 25, 2006

- \* A chain of weak links on spinach
- \* E. coli also a concern for home gardeners
- \* Spinach from Natural Selection Foods
- \* Fresh leafy greens – Are they safe enough?
- \* Israeli company develops bug-resistant bananas [tissue-cultured **not** GM]
- \* Monsanto and Syngenta to expand testing of GM cotton in Burkina Faso
- \* **ITSSD: IP-Based Innovation, Not IP Opportunism, is in Brazil's Best Interests**
- \* DDT's return is a good thing. Really
